

Cushion Tire Forklift Attachments

Cushion Tire Forklift Attachment - Cushion tires have a smooth profile on a firm tire with its tread being attached to a steel ring to be able to shape the tire. The tire is pressed on the hub that is then affixed onto the lift truck. These types of tires are suited for use in smooth floor warehouses and are available in different rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is a very solid tire. These types of tires are utilized as a replacement for cushion tires when there is a higher load capacity than can be acquired utilizing a cushion tire and such applications that require a lower steering effort. Poly tires available in a range of hardness ratings so as to meet various particular application requirements. Orderpicker lift trucks and Narrow Aisle models will normally make use of small diameter poly tires for their outrigger load wheels.
